Type three to five: Projector Design

The projection design F3+S+ is the world's most powerful single chip DLP™ projector. It has been designed to meet the ever increasing requirements in professional imaging solutions, such as public displays, medical imaging, control rooms and visualization and simulation solutions. Utilising DLP™ technology, the F3 SXGA+ features 1400 x 1050 pixel resolution, and fully configurable brightness at up to 5500 ANSI lumens, creating the world's most powerful single chip DLP™ projector. The F3 XGA (1024 x 768) is a cost effective model, based on the high end F3 SXGA+. It is primarily targeted at rental and staging applications, as well as high intensity 24/7 installations.

According to our communications area all projectors are in good working order. Please note that these are four generations old and once cost was at \$15K a piece. All projectors are designed to be used in a total dark room. The Luminescence rating is strong and makes the projection look dull (not bright). These units are in no longer under warranty.
